Designated Reviewer

Date of issue....: 2025-03-24

Total number of pages: 71 pages

Name of Testing Laboratory

Guangdong Lintek Certification Group Co., Ltd. preparing the Report::

Address....: Room 318, No.116-2, Guanlan Road, Fucheng Street, Longhua

District, Shenzhen, Guangdong, China

Applicant's name: Distribuciones Solares del Principado S.L.

P.I. Promogranda N°22 C.P33199 Siero- Asturias-Spain Address....:

Test specification:

Standard:: IEC 62368-1:2018

EN IEC 62368-1:2020+A11:2020

Test procedure:: Test report

Non-standard test method:: N/A

Test Report Form No.: IEC62368 1E

Test Report Form(s) Originator: Lintek-Lab

Master TRF: Dated 2021-02-04

Test item description....: LiFePO 4 battery

Trade Mark(s):

Manufacturer: KIJO Power(Xinyu) Co., Ltd

Address.....: 4/F, BUILDING 6, INDUSTRIAL REAL ESTATE, NO.1988,

DONGXING ROAD XINYU, JIANGXI PROVINCE, CHINA

LFP 12.8V, 12.8V400Ah Model/Type reference:

12.8V400Ah Ratings....:

Test item particulars:	
Product group:	☐ end product ☐ built-in component
Classification of use by:	☐ Ordinary person ☐ Children likely present ☐ Instructed person
Supply connection:	☑ Skilled person☐ AC mains☑ DC mains☑ not mains connected:
Supply tolerance:	☐ ES1 ☐ ES2 ☐ ES3 ☐ +10%/-10% ☐ +20%/-15%
Supply connection – type:	 + %/ - % None pluggable equipment type A - non-detachable supply cord appliance coupler direct plug-in
	 □ pluggable equipment type B - □ non-detachable supply cord □ appliance coupler □ permanent connection □ mating connector of other: Not connected to Mains
Considered current rating of protective device:	☐ A; Location: ☐ building ☐ equipment
Equipment mobility::	N/A movable hand-held transportable direct plug-in stationary for building-in wall/ceiling-mounted SRME/rack-mounted
Overvoltage category (OVC)::	☐ other: ☐ OVC II ☐ OVC III ☐ OVC IV ☐ other: not directly connected to the mains
Class of equipment:	☐ Class I ☐ Class II ☐ Class III ☐ Not classified ☐
Special installation location:	N/A ☐ restricted access area☐ outdoor location☐
Pollution degree (PD):	□ PD 1 □ PD 3
Manufacturer's specified T_{ma} :	35°C ☐ Outdoor:
IP protection class:	☐ IP
Power systems:	☐ TN ☐ TT ☐ IT - V L-L ☐ not AC mains
Altitude during operation (m):	
Altitude of test laboratory (m):	
Mass of equipment (kg):	>7kg

Possible test case verdicts:
- test case does not apply to the test object: N/A
- test object does meet the requirement: P (Pass)
- test object does not meet the requirement: F (Fail)
Testing:
Date of receipt of test item: 2025-03-14
Date (s) of performance of tests: 2025-03-14 to 2025-03-24
General remarks:
"(See Enclosure #)" refers to additional information appended to the report. "(See appended table)" refers to a table appended to the report.
Throughout this report a \square comma / \boxtimes point is used as the decimal separator.
The related applicable CTL decisions have been considered and the requirements found fulfilled.
General disclaimer:
The test results presented in this report relate only to the object tested. This report shall not be reproduced, except in full, without the written approval of the Issuing Testing Laboratory. The authenticity of this Test Report and its contents can be verified by contacting the Lintek-Lab, responsible for this Test Report. The test results presented in this report relate only to the object tested. If you have any objection to the testing results, please advise us within 15 working days after publishing, otherwise your claims will not be accepted. The test report is valid for above tested sample only and shall not be reproduced in part without written
approval of Lintek-Lab. This document is issued by the company under its General Conditions of Service accessible www.linteklab.com. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.
Unless otherwise stated: (a) the results shown in this document refer only to the sample(s) tested and (b) such sample(s) are retained for 3 months.
Manufacturer's Declaration per sub-clause 4.2.5 of IECEE 02:
The application for obtaining a Test Certificate includes more than one factory location and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided
When differences exist; they shall be identified in the General product information section.
Name and address of factory (ies): Same as Manufacture
General product information and other remarks:
The product is a LiFePO4 battery. all electronic components are mounted on PWB and housed in a plastic enclosure All models are the same except model name and capacity. The model 12.8V400Ah was selected to be tested

Clause	Possible Hazard			
5	Electrically-caused injury			
Class and Energy Source	Body Part Safeguards			
(e.g. ES3: Primary circuit)	(e.g. Ordinary)	В	S	R
ES1: all circuit	Ordinary	N/A	N/A	N/A
6	Electrically-caused fire			
Class and Energy Source	Material part		Safeguards	
(e.g. PS2: 100 Watt circuit)	(e.g. Printed board)	В	1 st S	2 nd S
PS3	Enclosure, PCB	No parts exceeding 90% of its spontaneous Ignition temperature	1, Plastic enclosure V-0 used. 2, PCB V-1 or better used	N/A
7	Injury caused by hazardous substances			
Class and Energy Source	Body Part	Safeguards		
(e.g. Ozone)	(e.g., Skilled)	В	S	R
N/A (No such source)	N/A	N/A	N/A	N/A
8	Mechanically-caused injury			
Class and Energy Source	Body Part			
(e.g. MS3: Plastic fan blades)	(e.g. Ordinary)	В	S	R
MS1: Edges and corners	Ordinary	N/A	N/A	N/A
MS2: Equipment mass	Ordinary	N/A	N/A	N/A
9	Thermal burn			
Class and Energy Source	Body Part	Safeguards		
(e.g. TS1: Keyboard caps)	(e.g., Ordinary)	В	S	R
TS1: Accessible parts	Ordinary	N/A	N/A	N/A
10	Radiation			
Class and Energy Source	Body Part		Safeguards	
(e.g. RS1: PMP sound output)	(e.g., Ordinary)	В	S	R
N/A	N/A	N/A	N/A	N/A

O.	IEC 62368-1	D 11 D 1	\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \
Clause	Requirement + Test	Result - Remark	Verdict
4	GENERAL REQUIREMENTS		Р
4.1.1	Acceptance of materials, components and subassemblies	See appended table 4.1.2	Р
4.1.2	Use of components	Components which are certified to IEC and/or national standards are used correctly within their ratings. Components not covered by IEC standards are tested under the conditions present in the equipment. See also Annex G	Р
4.1.3	Equipment design and construction		Р
4.1.4	Specified ambient temperature for outdoor use (°C)	Not outdoor equipment	N/A
4.1.5	Constructions and components not specifically covered	No this constructions and components.	N/A
4.1.8	Liquids and liquid filled components (LFC)	No such component used.	N/A
4.1.15	Markings and instructions	(See Annex F)	Р
4.4.3	Safeguard robustness		Р
4.4.3.1	General		Р
4.4.3.2	Steady force tests	(See annex T.5)	Р
4.4.3.3	Drop tests	(See annex T.7)	Р
4.4.3.4	Impact tests		N/A
4.4.3.5	Internal accessible safeguard tests	The external enclosure cannot be opened without tool.	N/A
4.4.3.6	Glass impact tests		N/A
4.4.3.7	Glass fixation tests		N/A
	Glass impact test (1J)		N/A
	Push/pull test (10 N)		N/A
4.4.3.8	Thermoplastic material tests	(See annex T.8)	Р
4.4.3.9	Air comprising a safeguard	No such safeguard used	N/A
4.4.3.10	Accessibility, glass, safeguard effectiveness		N/A
4.4.4	Displacement of a safeguard by an insulating liquid		N/A
4.4.5	Safety interlocks		N/A
4.5	Explosion		Р
4.5.1	General	No explosion occurs during normal/abnormal operation and single fault conditions	Р
4.5.2	No explosion during normal/abnormal operating condition	(See Clause B.2, B.3)	Р
	No harm by explosion during single fault conditions	(See Clause B.4)	Р
	•	•	

	IEC 62368-1		
Clause	Requirement + Test	Result - Remark	Verdict
4.6	Fixing of conductors		N/A
	Fix conductors not to defeat a safeguard	Only ES1 for internal circuits, no safeguard affected by conductor displacement.	N/A
	Compliance is checked by test:		N/A
4.7	Equipment for direct insertion into mains socker	t-outlets	N/A
4.7.2	Mains plug part complies with relevant standard :	Not such equipment.	N/A
4.7.3	Torque (Nm)		N/A
4.8	Equipment containing coin/button cell batteries	•	N/A
4.8.1	General	No such battery used.	N/A
4.8.2	Instructional safeguard:		N/A
4.8.3	Battery compartment door/cover construction		N/A
	Open torque test		N/A
4.8.4.2	Stress relief test		N/A
4.8.4.3	Battery replacement test		N/A
4.8.4.4	Drop test		N/A
4.8.4.5	Impact test		N/A
4.8.4.6	Crush test		N/A
4.8.5	Compliance		N/A
	30N force test with test probe		N/A
	20N force test with test hook		N/A
4.9	Likelihood of fire or shock due to entry of condu	ictive object	N/A
4.10	Component requirements		N/A
4.10.1	Disconnect Device		N/A
4.10.2	Switches and relays		N/A

5	ELECTRICALLY-CAUSED INJURY		Р
5.2	Classification and limits of electrical energy source	ces	Р
5.2.2	ES1, ES2 and ES3 limits	supplied by max. 12Vd.c. all circuits considered as ES1.	Р
5.2.2.2	Steady-state voltage and current limits		N/A
5.2.2.3	Capacitance limits		N/A
5.2.2.4	Single pulse limits:	No single pulse	N/A
5.2.2.5	Limits for repetitive pulses	No repetitive pulses	N/A
5.2.2.6	Ringing signals	No analogue telephone network ringing signals	N/A
5.2.2.7	Audio signals		N/A
5.3	Protection against electrical energy sources	•	N/A

	IEC 62368-1		
Clause	Requirement + Test	Result - Remark	Verdict
5.3.1	General Requirements for accessible parts to ordinary, instructed and skilled persons		N/A
5.3.1 a)	Accessible ES1/ES2 derived from ES2/ES3 circuits		N/A
5.3.1 b)	Skilled persons not unintentional contact ES3 bare conductors		N/A
5.3.2.1	Accessibility to electrical energy sources and safeguards		N/A
	Accessibility to outdoor equipment bare parts		N/A
5.3.2.2	Contact requirements		N/A
	Test with test probe from Annex V		-
5.3.2.2 a)	Air gap – electric strength test potential (V):		N/A
5.3.2.2 b)	Air gap – distance (mm):		N/A
5.3.2.3	Compliance		N/A
5.3.2.4	Terminals for connecting stripped wire		N/A
5.4	Insulation materials and requirements		N/A
5.4.1.2	Properties of insulating material		N/A
5.4.1.3	Material is non-hygroscopic		N/A
5.4.1.4	Maximum operating temperature for insulating materials:		N/A
5.4.1.5	Pollution degrees:		N/A
5.4.1.5.2	Test for pollution degree 1 environment and for an insulating compound		N/A
5.4.1.5.3	Thermal cycling test		N/A
5.4.1.6	Insulation in transformers with varying dimensions		N/A
5.4.1.7	Insulation in circuits generating starting pulses		N/A
5.4.1.8	Determination of working voltage:		N/A
5.4.1.9	Insulating surfaces		N/A
5.4.1.10	Thermoplastic parts on which conductive metallic parts are directly mounted		N/A
5.4.1.10.2	Vicat test:		N/A
5.4.1.10.3	Ball pressure test:		N/A
5.4.2	Clearances		N/A
5.4.2.1	General requirements		N/A
	Clearances in circuits connected to AC Mains, Alternative method		N/A

5.4.2.3.2.3	d.c. mains transient voltage:		_
5.4.2.3.2.4	External circuit transient voltage:		_
5.4.2.3.2.5	Transient voltage determined by measurement:		_
5.4.2.4	Determining the adequacy of a clearance using an electric strength test:		N/A
5.4.2.5	Multiplication factors for clearances and test voltages		N/A
5.4.2.6	Clearance measurement		N/A
5.4.3	Creepage distances		N/A
5.4.3.1	General		N/A
5.4.3.3	Material group:		
5.4.3.4	Creepage distances measurement:		N/A
5.4.4	Solid insulation		N/A
5.4.4.1	General requirements		N/A
5.4.4.2	Minimum distance through insulation:		N/A
5.4.4.3	Insulating compound forming solid insulation		N/A
5.4.4.4	Solid insulation in semiconductor devices		N/A
5.4.4.5	Insulating compound forming cemented joints		N/A
5.4.4.6	Thin sheet material		N/A
5.4.4.6.1	General requirements		N/A
5.4.4.6.2	Separable thin sheet material		N/A
	Number of layers (pcs):		N/A
5.4.4.6.3	Non-separable thin sheet material		N/A
	Number of layers (pcs):		N/A
5.4.4.6.4	Standard test procedure for non-separable thin sheet material:		N/A
5.4.4.6.5	Mandrel test		N/A
5.4.4.7	Solid insulation in wound components		N/A
5.4.4.9	Solid insulation at frequencies >30 kHz, <i>E</i> _P , <i>K</i> _R , <i>d</i> , <i>V</i> _{PW} (V):		N/A
	Alternative by electric strength test, tested voltage (V), K _R		N/A
5.4.5	Antenna terminal insulation		N/A
5.4.5.1	General		N/A
5.4.5.2	Voltage surge test		N/A
5.4.5.3	Insulation resistance (MΩ)		N/A
	Electric strength test		N/A

	IEC 62368-1		
Clause	Requirement + Test	Result - Remark	Verdict
5.4.6	Insulation of internal wire as part of supplementary safeguard		N/A
5.4.7	Tests for semiconductor components and for cemented joints		N/A
5.4.8	Humidity conditioning		N/A
	Relative humidity (%), temperature (°C), duration (h):		_
5.4.9	Electric strength test		N/A
5.4.9.1	Test procedure for type test of solid insulation:		N/A
5.4.9.2	Test procedure for routine test		N/A
5.4.10	Safeguards against transient voltages from external circuits		N/A
5.4.10.1	Parts and circuits separated from external circuits		N/A
5.4.10.2	Test methods		N/A
5.4.10.2.1	General		N/A
5.4.10.2.2	Impulse test		N/A
5.4.10.2.3	Steady-state test		N/A
5.4.10.3	Verification for insulation breakdown for impulse test:		N/A
5.4.11	Separation between external circuits and earth	No such circuit	N/A
5.4.11.1	Exceptions to separation between external circuits and earth		N/A
5.4.11.2	Requirements		N/A
	SPDs bridge separation between external circuit and earth		N/A
	Rated operating voltage U _{op} (V):		_
	Nominal voltage U _{peak} (V):		_
	Max increase due to variation ΔU _{sp} :		_
	Max increase due to ageing ΔUsa:		_
5.4.11.3	Test method and compliance:		N/A
5.4.12	Insulating liquid		N/A
5.4.12.1	General requirements		N/A
5.4.12.2	Electric strength of an insulating liquid:		N/A
5.4.12.3	Compatibility of an insulating liquid:		N/A
5.4.12.4	Container for insulating liquid:		N/A
5.5	Components as safeguards	1	N/A
5.5.1	General		N/A
5.5.2	Capacitors and RC units		N/A
5.5.2.1	General requirement		N/A
	I	1	

	IEC 62368-1

	Annex ZD (informative) flexible	IEC and CENELEC code designations for cords	
1	Modification to Clause 3 .		N/A
3.3.19	Sound exposure		N/A
	Replace 3.3.19 of IEC 62368-1 with the following definitions:		

IEC62368_1E- ATTACHMENT				
Clause	Requirement + Test		Result - Remark	Verdict

		1	
3.3.19.1	momentary exposure level, MEL		N/A
	metric for estimating 1 s sound exposure level from		
	the HD 483-1 S2 test signal applied to both channels, based on EN 50332-1:2013, 4.2.		
	Note 1 to entry: MEL is measured as A-weighted		
	levels in dB.		
	Note 2 to entry: See B.3 of EN 50332-3:2017 for additional information.		
3.3.19.3	sound exposure, <i>E</i>		N/A
	A-weighted sound pressure (p) squared and integrated over a stated period of time, T		
	Note 1 to entry: The SI unit is Pa^2 s.		
	$E = \int p(t)^2 \mathrm{d}t$		
	0		
3.3.19.4	sound exposure level, SEL		N/A
	logarithmic measure of sound exposure relative to		
	a reference value, <i>E0</i> , typically the 1 kHz threshold of hearing in humans.		
	Note 1 to entry: SEL is measured as A-weighted levels in dB.		
	$SEL = 10 \lg \left(\frac{E}{E_0}\right)_{dB}$		
	Note 2 to entry: See B.4 of EN 50332-3:2017 for additional information.		
3.3.19.5	digital signal level relative to full scale, dBFS		N/A
	levels reported in dBFS are always r.m.s. Full		
	scale level, 0 dBFS, is the level of a dc-free 997-		
	Hz sine wave whose undithered positive peak value is positive digital full scale, leaving the code		
	corresponding to negative digital full scale unused		
	Note 1 to entry: It is invalid to use dBFS for non-		
	r.m.s. levels. Because the definition of full scale is		
	based on a sine wave, the level of signals with a crest factor lower than that of a sine wave may		
	exceed 0 dBFS. In particular, square wave signals		
	may reach +3,01 dBFS.		
2	Modification to Clause 10		N/A
10.6	Safeguards against acoustic energy sources		N/A
	Replace 10.6 of IEC 62368-1 with the following:		

IEC62368_1E- ATTACHMENT			
Clause	Requirement + Test	Result - Remark	Verdict
10.6.1.1	Introduction Safeguard requirements for protection against long-term exposure to excessive sound pressure levels from personal music players closely coupled to the ear are specified below. Requirements for earphones and headphones intended for use with personal music players are also covered. A personal music player is a portable equipment intended for use by an ordinary person, that: — is designed to allow the user to listen to audio or audiovisual content / material; and — uses a listening device, such as headphones or earphones that can be worn in or on or around the ears; and — has a player that can be body worn (of a size suitable to be carried in a clothing pocket) and is intended for the user to walk around with while in continuous use (for example, on a street, in a subway, at an airport, etc.). EXAMPLES Portable CD players, MP3 audio players, mobile phones with MP3 type features, PDAs or similar equipment. Personal music players shall comply with the requirements of either 10.6.2 or 10.6.3. NOTE 1 Protection against acoustic energy sources from telecom applications is referenced to ITU-T P.360. NOTE 2 It is the intention of the Committee to allow the alternative methods for now, but to only		N/A
	use the dose measurement method as given in 10.6.5 in future. Therefore, manufacturers are encouraged to implement 10.6.5 as soon as possible. Listening devices sold separately shall comply with the requirements of 10.6.6. These requirements are valid for music or video mode only. The requirements do not apply to: — professional equipment; NOTE 3 Professional equipment is equipment sold through special sales channels. All products sold through normal electronics stores are considered not to be professional equipment. — hearing aid equipment and other devices for assistive listening; — the following type of analogue personal music		

	IEC62368_1E- ATTACHM	EN I	
Clause	Requirement + Test	Result - Remark	Verdict
	players: • long distance radio receiver (for example, a multiband radio receiver or world band radio receiver, an AM radio receiver), and • cassette player/recorder;		
	NOTE 4 This exemption has been allowed because this technology is falling out of use and it is expected that within a few years it will no longer exist. This exemption will not be extended to other technologies.		
	 a player while connected to an external amplifier that does not allow the user to walk around while in use. 		
	For equipment that is clearly designed or intended primarily for use by children, the limits of the relevant toy standards may apply.		
	The relevant requirements are given in EN 71-1:2011, 4.20 and the related tests methods and measurement distances apply.		
10.6.1.2	Non-ionizing radiation from radio frequencies in the range 0 to 300 GHz		N/A
	The amount of non-ionizing radiation is regulated by European Council Recommendation 1999/519/EC of 12 July 1999 on the limitation of exposure of the general public to electromagnetic fields (0 Hz to 300 GHz). For intentional radiators, ICNIRP guidelines should be taken into account for Limiting Exposure to Time-Varying Electric, Magnetic, and Electromagnetic Fields (up to 300 GHz). For handheld and body mounted devices, attention is drawn to EN 50360 and EN 50566.		
10.6.2	Classification of devices without the capacity to	estimate sound dose	N/A
10.6.2.1	General This standard is transitioning from short-term based (30 s) requirements to long-term based (40 hour) requirements. These clauses remain in effect only for devices that do not comply with sound dose estimation as stipulated in EN 50332-3.		N/A
	For classifying the acoustic output $LAeq, T$, measurements are based on the A-weighted equivalent sound pressure level over a 30 s period.		
	For music where the average sound pressure (long term $LAeq, T$) measured over the duration of the song is lower than the average produced by the programme simulation noise, measurements		

	IEC62368_1E- ATTACHM	ENT	
Clause	Requirement + Test	Result - Remark	Verdict
	may be done over the duration of the complete song. In this case, <i>T</i> becomes the duration of the song.		
	NOTE Classical music, acoustic music and broadcast typically has an average sound pressure (long term <i>L</i> Aeq, <i>T</i>) which is much lower than the average programme simulation noise. Therefore, if the player is capable to analyse the content and compare it with the programme simulation noise, the warning does not need to be given as long as the average sound pressure of the song does not exceed the required limit. For example, if the player is set with the programme simulation noise to 85 dB, but the average music level of the song is only 65 dB, there is no need to give a warning or ask an acknowledgement as long as the average sound level of the song is not above the basic limit of 85		
10.6.2.2	dB. RS1 limits (to be superseded, see 10.6.3.2)		N/A
10.6.2.3	RS1 is a class 1 acoustic energy source that does not exceed the following: — for equipment provided as a package (player with its listening device), and with a proprietary connector between the player and its listening device, or where the combination of player and listening device is known by other means such as setting or automatic detection, the <i>L</i> Aeq, <i>T</i> acoustic output shall be ≤ 85 dB when playing the fixed "programme simulation noise" described in EN 50332-1. — for equipment provided with a standardized connector (for example, a 3,5 phone jack) that allows connection to a listening device for general use, the unweighted r.m.s. output voltage shall be ≤ 27 mV (analogue interface) or -25 dBFS (digital interface) when playing the fixed "programme simulation noise" described in EN 50332-1. — The RS1 limits will be updated for all devices as per 10.6.3.2. RS2 limits (to be superseded, see 10.6.3.3)		N/A
10.0.2.3	RS2 is a class 2 acoustic energy source that does not exceed the following: — for equipment provided as a package (player with its listening device), and with a proprietary connector between the player and its listening device, or when the combination of player and listening device is known by other means such as setting or automatic 130 detection, the <i>L</i> Aeq, <i>T</i> acoustic output shall be ≤ 100 dB(A) when playing the fixed "programme simulation noise" as described in EN 50332-1. — for equipment provided with a standardized		IN/A

	IEC62368_1E- ATTACHM	ENT	
Clause	Requirement + Test	Result - Remark	Verdict
	connector (for example, a 3,5 phone jack) that allows connection to a listening device for general use, the unweighted r.m.s. output voltage shall be ≤ 150 mV (analogue interface) or -10 dBFS (digital interface) when playing the fixed "programme simulation noise" as described in EN 50332-1.		
10.6.2.4	RS3 limits		N/A
	RS3 is a class 3 acoustic energy source that exceeds RS2 limits.		
10.6.3	Classification of devices (new)		N/A
10.6.3.1	General		N/A
	Previous limits (10.6.2) created abundant false negative and false positive PMP sound level warnings. New limits, compliant with The Commission Decision of 23 June 2009, are given below.		
10.6.3.2	RS1 limits (new)		N/A
	RS1 is a class 1 acoustic energy source that does not exceed the following: — for equipment provided as a package (player with its listening device), and with a proprietary connector between the player and its listening device, or where the combination of player and listening device is known by other means such as setting or automatic detection, the <i>L</i> Aeq, <i>T</i> acoustic output shall be ≤ 80 dB when playing the fixed "programme simulation noise" described in EN 50332-1. — for equipment provided with a standardized connector (for example, a 3,5 phone jack) that allows connection to a listening device for general use, the unweighted r.m.s. output voltage shall be ≤ 15 mV (analogue interface) or -30 dBFS (digital interface) when playing the fixed "programme simulation noise" described in EN 50332-1.		
10.6.3.3	RS2 limits (new)		N/A
	RS2 is a class 2 acoustic energy source that does not exceed the following: — for equipment provided as a package (player with its listening device), and with a proprietary connector between the player and its listening device, or where the combination of player and listening device is known by other means such as setting or automatic detection, the weekly sound exposure level, as described in EN 50332-3, shall be ≤ 80 dB when playing the fixed "programme simulation noise" described in EN 50332-1. — for equipment provided with a standardized connector (for example, a 3,5 phone jack) that allows connection to a listening device for general use, the unweighted r.m.s. output level, integrated over one week, as described in EN50332-3, shall		

IEC62368_1E- ATTACHMENT				
Clause	Requirement + Test	Result - Remark	Verdict	
	be ≤ 15 mV (analogue interface) or -30 dBFS (digital interface) when playing the fixed "programme simulation noise" described in EN 50332-1.			
10.6.4	Requirements for maximum sound exposure		N/A	
10.6.4.1	Measurement methods		N/A	
	All volume controls shall be turned to maximum during tests.			
	Measurements shall be made in accordance with EN 50332-1 or EN 50332-2 as applicable.			
10.6.4.2	Protection of persons		N/A	
	Except as given below, protection requirements for parts accessible to ordinary persons, instructed persons and skilled persons are given in 4.3.			
	NOTE 1 Volume control is not considered a safeguard.			
	Between RS2 and an ordinary person , the basic safeguard may be replaced by an instructional safeguard in accordance with Clause F.5, except that the instructional safeguard shall be placed on the equipment, or on the packaging, or in the instruction manual. Alternatively, the instructional safeguard may be given through the equipment display during use.			
	The elements of the instructional safeguard shall be as follows:			
	 element 1a: the symbol (2011-01) element 2: "High sound pressure" or equivalent wording element 3: "Hearing damage risk" or equivalent wording element 4: "Do not listen at high volume levels for long periods." or equivalent wording 			
	An equipment safeguard shall prevent exposure of an ordinary person to an RS2 source without intentional physical action from the ordinary person and shall automatically return to an output level not exceeding what is specified for an RS1 source when the power is switched off.			
	The equipment shall provide a means to actively inform the user of the increased sound level when the equipment is operated with an output exceeding RS1. Any means used shall be acknowledged by the user before activating a mode of operation which allows for an output			

	IEC62368_1E- ATTACHM	ENT	
Clause	Requirement + Test	Result - Remark	Verdict
	exceeding RS1. The acknowledgement does not need to be repeated more than once every 20 h of cumulative listening time.		
	NOTE 2 Examples of means include visual or audible signals. Action from the user is always needed.		
	NOTE 3 The 20 h listening time is the accumulative listening time, independent of how often and how long the personal music player has been switched off.		
	A skilled person shall not be unintentionally exposed to RS3.		
10.6.5	Requirements for dose-based systems		N/A
10.6.5.1	General requirements		N/A
	Personal music players shall give the warnings as provided below when tested according to EN 50332-3, using the limits from this clause.		
	The manufacturer may offer optional settings to allow the users to modify when and how they wish to receive the notifications and warnings to promote a better user experience without defeating the safeguards. This allows the users to be informed in a method that best meets their physical capabilities and device usage needs. If such optional settings are offered, an administrator (for example, parental restrictions, business/educational administrators, etc.) shall be able to lock any optional settings into a specific configuration. The personal music player shall be supplied with easy to understand explanation to the user of the dose management system, the risks involved, and how to use the system safely. The user shall be made aware that other sources may significantly contribute to their sound exposure, for example work, transportation, concerts, clubs, cinema, car races, etc.		
10.6.5.2	Dose-based warning and requirements		N/A
	When a dose of 100 % <i>CSD</i> is reached, and at least at every 100 % further increase of <i>CSD</i> , the device shall warn the user and require an acknowledgement. In case the user does not acknowledge, the output level shall automatically decrease to compliance with class RS1. The warning shall at least clearly indicate that listoning above 100 % <i>CSD</i> leads to the risk of		
	listening above 100 % CSD leads to the risk of hearing damage or loss.		
10.6.5.3	Exposure-based requirements		N/A

	IEC62368_1E- ATTACHMENT				
Clause	Requirement + Test	Result - Remark	Verdict		
	With only dose-based requirements, cause and effect could be far separated in time, defying the purpose of educating users about safe listening practice. In addition to dose-based requirements, a PMP shall therefore also put a limit to the short-term sound level a user can listen at.				
	The exposure-based limiter (EL) shall automatically reduce the sound level not to exceed 100 dB(A) or 150 mV integrated over the past 180 s, based on methodology defined in EN 50332-3. The EL settling time (time from starting level reduction to reaching target output) shall be 10 s or faster.				
	Test of EL functionality is conducted according to EN 50332-3, using the limits from this clause. For equipment provided as a package (player with its listening device), the level integrated over 180 s shall be 100 dB or lower. For equipment provided with a standardized connector, the unweighted level integrated over 180 s shall be no more than 150 mV for an analogue interface and no more than -10 dBFS for a digital interface.				
	NOTE In case the source is known not to be music (or test signal), the EL may be disabled.

Clause	Requirement + Test		Result - Remark	Verdict

10.6.6	Requirements for listening devices (headphones, earphones, etc.)	N/A
10.6.6.1	Corded listening devices with analogue input	N/A
	With 94 dB LAeq acoustic pressure output of the	
	listening device, and with the volume and sound	
	settings in the listening device (for example, built-	
	in volume level control, additional sound features	
	like equalization, etc.) set to the combination of	
	positions that maximize the measured acoustic	
	output, the input voltage of the listening device	
	when playing the fixed "programme simulation noise" as described in EN 50332-1 shall be ≥ 75	
	mV.	
	NOTE The values of 94 dB and 75 mV correspond	
10.6.6.2	with 85 dB and 27 mV or 100 dB and 150 mV. Corded listening devices with digital input	21/2
10.0.0.2	Corded listering devices with digital input	N/A
	With any playing device playing the fixed	
	"programme simulation noise" described in EN	
	50332-1, and with the volume and sound settings	
	in the listening device (for example, built-in volume level control, additional sound features like	
	equalization, etc.) set to the combination of	
	positions that maximize the measured acoustic	
	output, the LAeq, T acoustic output of the listening	
	device shall be ≤ 100 dB with an input signal of -	
10.6.6.3	10 dBFS. Cordless listening devices	
10.0.0.3	Cordiess listering devices	N/A
	In cordless mode,	
	with any playing and transmitting device playing	
	the fixed programme simulation noise described in	
	EN 50332-1; and - respecting the cordless transmission standards,	
	where an air interface standard exists that	
	specifies the equivalent acoustic level; and	
	with volume and sound settings in the receiving	
	device (for example, built-in volume level control,	
	additional sound features like equalization, etc.)	
	set to the combination of positions that maximize	
	the measured acoustic output for the above	
	mentioned programme simulation noise, the	
	LAeq, T acoustic output of the listening device shall be ≤ 100 dB with an input signal of -10 dBFS.	
10.6.6.4	Measurement method	N/A
	Measurements shall be made in accordance with	
	EN 50332-2 as applicable.

8	Modification to 10.5.1	
10.5.1	Add the following after the first paragraph:	N/A
	For RS 1 compliance is checked by measurement under the following conditions:	
	In addition to the normal operating conditions, all controls adjustable from the outside by hand, by any object such as a tool or a coin, and those internal adjustments or pre-sets which are not locked in a reliable manner, are adjusted so as to give maximum radiation whilst maintaining an intelligible picture for 1 h, at the end of which the measurement is made.	
	NOTE Z1 Soldered joints and paint lockings are examples of adequate locking.	
	The dose-rate is determined by means of a radiation monitor with an effective area of 10 cm², at any point 10 cm from the outer surface of the apparatus.	
	Moreover, the measurement shall be made under fault conditions causing an increase of the high voltage, provided an intelligible picture is maintained for 1 h, at the end of which the measurement is made.	
	For RS1, the dose-rate shall not exceed 1 µSv/h taking account of the background level.	
	NOTE Z2 These values appear in Directive 96/29/Euratom of 13 May 1996.	
9	Modification to G.7.1	
G.7.1	Add the following note:	N/A
	NOTE Z1 The harmonized code designations corresponding to the IEC cord types are given in Annex ZD.

Clause	Requirement + Test		Result - Remark	Verdict

4.7.3	United Kingdom	N/A
	To the end of the subclause the following is added:	
	The torque test is performed using a socket-outlet complying with BS 1363, and the plug part shall be assessed to the relevant clauses of BS 1363. Also see Annex G.4.2 of this annex	
5.2.2.2	Denmark	N/A
J.L.L.L	Definition	IN//T
	After the 2nd paragraph add the following:	
	A warning (marking safeguard) for high touch current is required if the touch current exceeds the limits of 3,5 mA a.c. or 10 mA d.c.	
5.4.11.1	Finland and Sweden	N/A
and		
Annex G	To the end of the subclause the following is added:	
	For separation of the telecommunication network from earth the following is applicable:	
	If this insulation is solid, including insulation forming part of a component, it shall at least consist of either • two layers of thin sheet material, each of which shall pass the electric strength test below, or	
	one layer having a distance through insulation of at least 0,4 mm, which shall pass the electric strength test below.	
	If this insulation forms part of a semiconductor component (e.g. an optocoupler), there is no distance through insulation requirement for the insulation consisting of an insulating compound completely filling the casing, so that clearances and creepage distances do not exist, if the component passes the electric strength test in accordance with the compliance clause below and in addition	
	passes the tests and inspection criteria of 5.4.8 with an electric strength test of 1,5 kV multiplied by 1,6 (the electric strength test of 5.4.9 shall be performed using 1,5 kV),	
	and	
	is subject to routine testing for electric strength during manufacturing, using a test voltage of 1,5 kV.	
	It is permitted to bridge this insulation with a capacitor complying with EN 60384-14:2005, subclass Y2.	

	IEC62368_1E- ATTACHME	NT	
Clause	Requirement + Test	Result - Remark	Verdict
	A capacitor classified Y3 according to EN 60384- 14:2005, may bridge this insulation under the following conditions:		
	 the insulation requirements are satisfied by having a capacitor classified Y3 as defined by EN 60384-14, which in addition to the Y3 testing, is tested with an impulse test of 2,5 kV defined in 5.4.11; 		
	 the additional testing shall be performed on all the test specimens as described in EN 60384- 14; 		
	the impulse test of 2,5 kV is to be performed before the endurance test in EN 60384-14, in the sequence of tests as described in EN 60384-14.		
5.5.2.1	Norway After the 3rd paragraph the following is added:		N/A
	Due to the IT power system used, capacitors are required to be rated for the applicable line-to-line voltage (230 V).		
5.5.6	Finland, Norway and Sweden		N/A
	To the end of the subclause the following is added Resistors used as basic safeguard or bridging basic insulation in class I pluggable equipment		
	type A shall comply with G.10.1 and the test of G.10.2.		
5.6.1	Denmark		N/A
	Add to the end of the subclause Due to many existing installations where the socket-outlets can be protected with fuses with higher rating than the rating of the socket- outlets the protection for pluggable equipment type A shall be an integral part of the equipment. Justification:		
	In Denmark an existing 13 A socket outlet can be protected by a 20 A fuse.		
5.6.4.2.1	Ireland and United Kingdom		N/A
	After the indent for pluggable equipment type A , the following is added: — the protective current rating is taken to be 13 A, this being the largest rating of fuse used in the mains plug.		
5.6.4.2.1	France		N/A
	After the indent for pluggable equipment type A , the following is added:		

	IEC62368_1E- ATTACHME	ENT	
Clause	Requirement + Test	Result - Remark	Verdict
	 in certain cases, the protective current rating of the circuit supplied from the mains is taken as 20 A instead of 16 A. 		
5.6.5.1	To the second paragraph the following is added: The range of conductor sizes of flexible cords to be accepted by terminals for equipment with a rated current over 10 A and up to and including 13 A is: 1,25 mm² to 1,5 mm² in cross-sectional area.		N/A
5.6.8	Norway To the end of the subclause the following is added Equipment connected with an earthed mains plug is classified as class I equipment. See the Norway marking requirement in 4.1.15. The symbol IEC 60417-6092, as specified in F.3.6.2, is accepted.		N/A
5.7.6	Denmark To the end of the subclause the following is added The installation instruction shall be affixed to the equipment if the protective conductor current exceeds the limits of 3,5 mA a.c. or 10 mA d.c.	:	N/A

IEC62368_1E- ATTACHMENT				
Clause	Requirement + Test		Result - Remark	Verdict

5.7.6.2	Denmark	N/A
	To the end of the subclause the following is	
	added:	
	The warning (marking safeguard) for high touch	
	current is required if the touch current or the protective current exceed the limits of 3,5 mA.	
5.7.7.1	Norway and Sweden	N/A
	To the end of the subclause the following is added:	
	The screen of the television distribution system is	
	normally not earthed at the entrance of the	
	building and there is normally no equipotential	
	bonding system within the building. Therefore the protective earthing of the building	
	installation needs to be isolated from the screen	
	of a cable distribution system.	
	It is however accepted to provide the insulation	
	external to the equipment by an adapter or an	
	interconnection cable with galvanic isolator, which	
	may be provided by a retailer, for example.	
	The user manual shall then have the following or	
	similar information in Norwegian and Swedish	
	language respectively, depending on in what country the equipment is intended to be used in:	
	country the equipment is interlided to be used in.	
	"Apparatus connected to the protective earthing of	
	the building installation through the mains	
	connection or through other apparatus with a	
	connection to protective earthing – and to a television distribution system using	
	coaxial cable, may in some circumstances create	
	a fire hazard. Connection to a television	
	distribution system therefore has to be provided	
	through a device providing electrical isolation	
	below a certain frequency range (galvanic isolator, see EN 60728-11)"	
	Isolator, see EN 00720-11)	
	NOTE In Norway, due to regulation for CATV-	
	installations, and in Sweden, a galvanic isolator	
	shall provide electrical insulation below 5 MHz. The insulation shall withstand a dielectric strength	
	of 1,5 kV r.m.s., 50 Hz or 60 Hz, for 1 min.	
	Translation to Norwegian (the Swedish text will also be accepted in Norway):	
	"Apparater som er koplet til beskyttelsesjord via	
	nettplugg og/eller via annet jordtilkoplet utstyr – og er tilkoplet et koaksialbasert kabel-TV	
	nett, kan forårsake brannfare.	
	For å unngå dette skal det ved tilkopling av	
	apparater til kabel-TV nett installeres en	

	-		
	IEC62368_1E- ATTACHM	ENT	_
Clause	Requirement + Test	Result - Remark	Verdict
	galvanisk isolator mellom apparatet og kabel-TV nettet."		
	Translation to Swedish: "Apparater som är kopplad till skyddsjord via jordat vägguttag och/eller via annan utrustning och samtidigt är kopplad till kabel-TV nät kan i vissa fall medföra risk för brand. För att undvika detta skall vid anslutning av apparaten till kabel-TV nät galvanisk isolator finnas mellan apparaten och kabel-TV nätet.".		
8.5.4.2.3	United Kingdom		N/A
	Add the following after the 2 nd dash bullet in 3 rd paragraph:		
	An emergency stop system complying with the requirements of IEC 60204-1 and ISO 13850 is required where there is a risk of personal injury.		
B.3.1 and B.4	Ireland and United Kingdom The following is applicable:		N/A
	To protect against excessive currents and short-circuits in the primary circuit of direct plug-in equipment , tests according to Annexes B.3.1 and B.4 shall be conducted using an external miniature circuit breaker complying with EN 60898-1, Type B, rated 32A. If the equipment does not pass these tests, suitable protective devices shall be included as an integral part of the direct plug-in equipment , until the requirements of Annexes B.3.1 and B.4 are met

Clause	Requirement + Test		Result - Remark	Verdict

G.4.2	Denmark	N/A
	To the end of the subclause the following is added:	
	Supply cords of single phase appliances having a rated current not exceeding 13 A shall be provided with a plug according to DS 60884-2-D1:2011.	
	CLASS I EQUIPMENT provided with socket- outlets with earth contacts or which are intended to be used in locations where protection against indirect contact is required according to the wiring rules shall be provided with a plug in accordance with standard sheet DK 2-1a or DK 2-5a.	
	If a single-phase equipment having a RATED CURRENT exceeding 13 A or if a polyphase equipment is provided with a supply cord with a plug, this plug shall be in accordance with the standard sheets DK 6-1a in DS 60884-2-D1 or EN 60309-2.	
	Mains socket outlets intended for providing power to Class II apparatus with a rated current of 2,5 A shall be in accordance DS 60884-2-D1:2011 standard sheet DKA 1-4a.	
	Other current rating socket outlets shall be in compliance with Standard Sheet DKA 1-3a or DKA 1-1c.	
	Mains socket-outlets with earth shall be in compliance with DS 60884-2-D1:2011 Standard Sheet DK 1-3a, DK 1-1c, DK1-1d, DK 1-5a or DK 1-7a	
	Justification: Heavy Current Regulations, Section 6c	
G.4.2	United Kingdom	N/A
	To the end of the subclause the following is added:	
	The plug part of direct plug-in equipment shall be assessed to BS 1363: Part 1, 12.1, 12.2, 12.3, 12.9, 12.11, 12.12, 12.13, 12.16, and 12.17, except that the test of 12.17 is performed at not less than 125 °C. Where the metal earth pin is replaced by an Insulated Shutter Opening Device (ISOD), the requirements of clauses 22.2 and 23 also apply.	
G.7.1	United Kingdom	N/A
	To the first paragraph the following is added:	

	IEC62368_1E- ATTACHMI	ENT	
Clause	Requirement + Test	Result - Remark	Verdict
	Equipment which is fitted with a flexible cable or cord and is designed to be connected to a mains socket conforming to BS 1363 by means of that flexible cable or cord shall be fitted with a 'standard plug' in accordance with the Plugs and Sockets etc. (Safety) Regulations 1994, Statutory Instrument 1994 No. 1768, unless exempted by those regulations.		
	NOTE "Standard plug" is defined in SI 1768:1994 and essentially means an approved plug conforming to BS 1363 or an approved conversion plug.		
G.7.1	Ireland		N/A
	To the first paragraph the following is added:		
	Apparatus which is fitted with a flexible cable or cord shall be provided with a plug in accordance with Statutory Instrument 525: 1997, "13 A Plugs and Conversion Adapters for Domestic Use Regulations: 1997. S.I. 525 provides for the recognition of a standard of another Member State which is equivalent to the relevant Irish Standard		
G.7.2	Ireland and United Kingdom		N/A
	To the first paragraph the following is added:		
	A power supply cord with a conductor of 1,25 mm ² is allowed for equipment which is rated over 10 A and up to and including 13 A.

ZC	ANNEX ZC, NATIONAL DEVIATIONS (EN)	N/A
10.5.2	Germany	N/A
	The following requirement applies:	
	For the operation of any cathode ray tube intended for the display of visual images operating at an acceleration voltage exceeding 40 kV, authorization is required, or application of type approval (Bauartzulassung) and marking.	
	Justification: German ministerial decree against ionizing radiation (Röntgenverordnung), in force since 2002-07-01, implementing the European Directive 96/29/EURATOM.
